Accession: C3448
A. Molecule type: protein
A. Molecule type: protein
A. Molecule type: protein
C. Comment: In this protein, the coiled-coil rod-like region found in many myosin heav
be protein is globular and does not self-associate into filaments.
C. Comment: In this protein, the coiled-coil rod-like region found in many myosin heav
be protein is globular and does not self-associate into filaments.
C. Genetics:
A. Introns: 1/3; 37/3; 60/2; 100/2; 153/3; 179/3; 208/2; 242/3; 287/3; 321/3; 4
A. Introns: 1/3; 37/3; 60/2; 100/2; 153/3; 179/3; 208/2; 242/3; 287/3; 331/3; 4
C. Superfamily: protozoan myosin heavy chain IB; myosin motor domain homology; SH3 hom
C. Keywords: actin binding: MTP, hydrolase; nucleotide binding; P-loop; phosphoprotein
F.101-108/Region: nucleotide-binding motif A (P-loop)
F.543-564/Region: carboxyl-terminal <CTD>
F. 671-1168/Domain: carboxyl-terminal <CTD>
F. 672-893/Region: alanine/glycine/proline-rich
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            C; Species: Homo sopiens (man)

A;Title: Organization of a type I keratin gene. Evidence for evolution of intermediat A; Reference number: A02940; MUID:85207552
A;Accession: A02940
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             C; Comment: Fourier analysis has identified a 7-residue repeating pattern (heptad) bet forms a stable alpha helical coiled coil but is interrupted by three short regions wi C; Comment: Most of the introns of the gene encoding this protein are located within the sequence at or near the beginning of heptad repeats. Several of these sites are co C; Comment: The amino and carboxyl ends are rich in glycine, serine, and aromatic resi

CONTINUITY RELEASE OF MATURE PROTEINS FROM THEIR

PROPROTEINS BY CLEAVAGE OF RG-XAA-YAA-ARG -1-ZAA BONDS,

WHEREE XAA CAN BE ANY AMINO ACID AND YAS IS ARG OR LYS.

-1- COPACTOR: PACE4A IS PROBABLY CALCIUM-DEPENDENT.

C-1- SUBUNIT: THE PACE4A IS PROBABLY CALCIUM-DEPENDENT.

C-1- SUBUNIT: THE PACE4A IS PROBABLY CALCIUM-DEPENDENT.

C-1- SUBUNIT: THE PACE4A IS PROBABLY CALCIUM-DEPENDENT.

C-1- SUBCELLULAR LOCATION: PACE4A-I BAND MONOMER, SUGGESTING THAT PROPERAME CASE MATURE PACE4A-I EXISTS ONLY AS A WONOMER, SUGGESTING THAT PROPERAME CASE MATOR PACE4A-I EXISTS ONLY AS A WONOMER, SUGGESTING THAT PROPERAME LOCATION: PACE4A-I AND PACE4-AII ARE SECRETED.

C-1- SUBCELLULAR LOCATION: PACEAA-I AND PACE4-AII ARE SECRETED.

C-1- SUBCELLULARLY PROBABLY THROUGH A HYDROPHOBIC CLUSTER IN THEIR CASE TERMINUS. PACE4B MIGHT BE SECRETED.

C-1- ALTERNATIVE PRODUCTS: 8 ISOSORMS; PACE4A-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-II AND PACE4E-I
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   C, CS AND D MIGHT BE ENZYMATICALLY INACTIVE.

TISSUE SPECIFICITY: EACH PACE4 ISOFORM EXHIBITS A UNIQUE
RESTRICTED DISTRIBUTION. PACE4A-I IS EXPRESSED IN HEART, BRAIN,
PLACEMTA, LUNG, SKELETALA MUSCLE, KIDNEY, PANCREAS, BUT AT
COMPARATIVELY HIGHER LEVELS IN THE LIVER. PACE4A-II IS AT LEAST
EXPRESSED IN PLACENTA. PACE4B WAS ONLY FOUND IN THE EMBRYONIC
KIDNEY CELL LINE FROM WHICH IT WAS ISOLATED. PACE4C AND PACE4D ARE
                                                                                                                                                                                                                                 MEDIINE-97335942; PubNed-9192737; Mori K., Kii S., Tsuji A., Nagahama M., Imamaki A., Hayashi K., Akamatsu T., Nagamune H., Matsuda Y.; Akamatsu T., Nagamune H., Matsuda Y.; Anovel human PACE4 isoform, PACE4E is an active processing protease containing a hydrophobic cluster at the carboxy terminus."; J. Biochem. 121:941-948(1997).

PLOC., Natl. Acad. Sci. U.S.A. 89:3280-3284(1992).

-!- FUNCTION: TRANSCRIPTION FACTOR THAT BINDS PREPERBUTIALLY TO THE RECOGNITION SEQUENCE WHICH CONSISTS OF TWO DISTINCT HALF-SITES, ('GCAT') AND ('TAAAT'), SEPARATED BY A NONCONSERVED SPACER REGION OF 0, 2, OR 3 NUCLEOTIDES. POSITIVELY REGULATES THE GENES UNDER THE CONTROL OF CORTICOTROPIN-RELEASING HORMONE (CRH) AND CRH II PROMOTERS (BY SIMILARITY).

-!- SUBCELLULAR LOCATION: NUCLEAT.

-!- SISSUE SPECIFICITY: EXPRESSED SPECIFICALLY IN THE NEUROECTODERMAL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                01-JUL-1993 (Rel. 26, Last sequence update)

                                                                                                                    -:- SUBCELLULAR LOCATION: Nuclear.
-:- ALTERNATIVE PRODUCTS: DIFFERENT ISOFORMS; ADULT-SPECIFIC ISOFORMS
A1, A2, A3, A4, AND EMBRYO-SPECIFIC ISOFORMS E1, E2 AND E3 (SHOWN
HERE); ARE PRODUCED BY ALTERNATIVE SPLICING.
-:- DEVELOPMENTAL STAGE: EXPRESSED IN BMBRYOS OF BOTH SEXES. ALSO
EXPRESSED IN THE PROGENTROR CELLS OF THE GENALINE.
-:- SIMILARITY: CONTAINS 2 RNA RECOGNITION MOTIFS (RRM).

-!- SUBUNT: HFFEROMETRAMER OF TWO TYPE I AND TWO TYPE II KERATINS.

-!- SUBUNT: HFFERALLY SOSCIATED WITH KERATIN 1.

-!- MISCELLANEOUS: THERE ARE TWO TYPES OF CYTOSKELETAL AND

MICROFIBRILLAR KERATIN, I (ACIDIC) AND II (NEUTRAL TO BASIC)

(40-55 AND 56-70 KILLDDALFONS, RESPECTIVELY).

-!- SIMILARITY: BELONGS TO THE INTERMEDIATE FILAMENT FAMILY.

Nature 33:672-676(1988).
-!- FUNCTION: THE EXACT FUNCTION OF THIS PROTEIN IS NOT KNOW, IT IS PROBABLY A RECEPTOR WITH A TYROSINE-PROTEIN KINASE ACTIVITY.
-!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein tyrosine phosphate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           -!- SUBCELLULAR LOCATION: Type I membrane protein.
-!- ALTERNATIVE SPLICING
-!- ALTERNATIVE SPLICING
-!- PRODUCES VARIANTS WITH SHORTER EXTRACELLULAR DOMAIN.
-!- SIMILARITY: BELONGS TO THE INSULIN RECEPTOR FAMILY OF TYROSINE-PROTEIN KINASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Bernards A., de la Monte S.; "The ltk receptor tyrosine kinase is expressed in pre-B lymphocytes and cerebral neurons and uses a non-AUG translational initiator."; EMBO J. 9:2279-2287(1990).

Mol. Cell. Biol. 16.626-63(1996).

• FUNCTION: INHIBITS DNA BINDING OF TCF3 (E47) HOWODIMERS AND TCF3 (E47) / NEURODIMERS AND ACTS AS A STRONG REPRESSOR OF NEURODIAND MYOD-RESPONSIVE GENES, PROBABLY BY HETERODIMERIZATION WITH CLASS A BASIC HELIX-LOOP-HELIX FACTORS. DESPITE THE PRESENCE OF NITH CLASS A BASIC DOMAIN, DOES NOT BIND TO DNA.

• SUBUNT: HETERODIMER WITH OTHER BHILH PROTEINS, LIKE TCF3 (E47).

• SUBCELLULAR LOCATION: Nuclear (Potential).

• SUBCELLULAR EDCATION: TRIDNEY, LUNG, BARIN AND PANCREAS (INSULINOMA).

• ITRILABILY: BELONGS TO THE BASIC HELIX-LOOP-HELIX (BHLH) FAMILY OF TRANSCRIPTION FACTORS. "ATONAL" SUBEAMILY.

Jacquemin P., Lannoy V., Rousseau G.G., Lemaigre F.P.;
"OC-2, a novel mammalian member of the ONECUT class of homeodomain transcription factors whose function in liver partially overlaps with that of hepatocyte nuclear factor-6.";
J. Biol. Chem. 274:2665-2671(1999).
--- FUNCTION: TRANSCRIPTIONAL ACTIVATOR. ACTIVATES THE TRANSCRIPTION OF A NUMBER OF LIVER GENES SUCH AS HNF3B.
--- SUBCELLOLAR LOCATION: Nuclear.
--- SIMILARITY: DELONGS TO THE CUT FAMILY OF HOMEOBOX PROTEINS.

J. Cell Sci. 107:635-644(1994).

- I. Cell Sci. 107:635-644(1994).

- I. FUNCTION: FORCE GENERATING PROTEIN OF EUKARYOTIC CILIA AND FLAGELIA. PRODUCES FORCE TOWARDS THE MINUS ENDS OF MICROTUBULES.

DYNEIN HAS ATPASE ACTIVITY.

- I. SUBUNIT: CONSISTS OF AT LEAST 3 HEAVY CHAINS (ALPHA, BETA AND GAMMA), 2 INTERMEDIATE CHAINS AND 8 LIGHT CHAINS.

- I. SIMILARITY: BELONGS TO THE DYNEIN HEAVY CHAIN FAMILY.
                                                                                                                                                                                                                                                                                                                                      MEDLINE-97329535; PubMed-9186009;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
